

Basic Auth in Dart-

```
String username = 'test';
String password = '123f';
String basicAuth =
    'Basic ' +
base64Encode(utf8.encode('$username:$password'));
print(basicAuth);

Response r = await get('https://api.somewhere.io',
    headers: {'authorization': basicAuth});
print(r.statusCode);
print(r.body);
```
